

There are four persons; each one is wearing a hat.  
Each one knows that 2 of the hats are black and 2 of the hats are red.

A is sitting behind a wall and can see no-one.

B can see no-one.

C can see only B.

D can see B and C.

The first one to say for certain, that he knows what colour hat he is wearing, wins 1 million pounds. Is it A, B, C or D?
